

Part 3: Alcohol

X162. Alcohol consumed (g/d) (alc_mratt)

Version: Baseline n0

Identifying and definitional attributes

Data element type: Derived data element

Definition: Alcohol consumed (g/d)

Relational and representational attributes

Data type: Numeric

Field size: Min. 1 Max. 5

Layout: NNN.NN

Data domain: Calculated grams of alcohol consumed per day in current decade
Measured in grams to two decimal places
Spaces=Not able to be determined/not answered

Collection methods: Grams per day alcohol consumed in current decade*
Total grams of alcohol per day = grams of alcohol from wine per day + grams of alcohol from spirits per day + grams of alcohol from beer per day

*Definition of Current Decade

Current alcohol data from baseline questionnaire is to be used for all calculations. The definition of current is: 'alcohol consumption during the decade of life corresponding to age at baseline attendance. For subjects 60-69 at baseline, we used data for age 60-69, for those 50-59 at baseline, use data for age 50-59, etc.' There are two exceptions:

1. If age at baseline is >69, then last decade (60-69) will be used for calculations.
2. If beer, wine and spirits questions in current age bracket have not been answered i.e. are equal to spaces, then use the previous age bracket.

Field name: alc_mrat
 Valid responses: 41,475
 Missing responses: 39

Q41. Representation of average alcohol amount (drkamt_cde)

Version: Baseline n0

Identifying and definitional attributes

Data element type: Data element

Definition: Representation of average alcohol amount

Relational and representational attributes

Data type: Numeric

Field size: Min. 1 Max. 1

Layout: N

Data domain: 1=Less
2=Same
3=More
Space=Not answered

Collection methods: Q41: 'Is the amount you drank last week more, less or about the same as you would drink most weeks?'

Field name: drkamt_cde
 Valid responses: 12,748
 Missing responses: 28,766
