Regular cervical screening is your best protection against cervical cancer.

If you're aged 25 and over, and have a cervix, you need to have a Cervical Screening Test every five years, even if you have had the HPV vaccine.

The Cervical Screening Test looks for HPV in your cervix. If left untreated, some types of HPV can lead to cervical cancer.

Your body, your choice.

Visit our directory of cervical screening providers across Victoria to find one that meets your needs. Choose from a range of health professionals:
