

Are you a Pinoy living in Australia?

You could be at risk of hepatitis B or C.

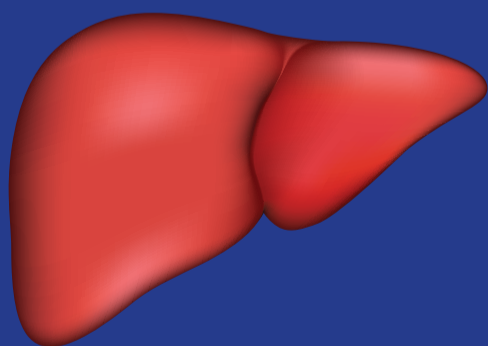

1 in 25 Filipino people are living with the hepatitis B or C virus.

Both may not show any symptoms.

If left untreated, hepatitis B and C can lead to liver damage and liver cancer.

Hepatitis B can be treated.
Hepatitis C can be cured.

Do not let hepatitis threaten you or your family. Ask your doctor for a hepatitis test today.

Testing and vaccination may be free.
Low-cost treatment and cure are available.

To speak to someone in Tagalog call **13 14 50** and ask to speak to Cancer Council Victoria.
